      <div type="abstract">
        <p>The semantic web is a proposal to make a more efficient web. By endowing the computer 'language' with a semantic structure defined by ontologies extracted from natural language, one hopes to facilitate the communication between human operators and computers and between computers. An ontology is a set of definitions that relate the terms and predicates of the vocabulary of the description language for a domain. It imposes a semantic structure that fix the meaning of terms and predicates that are polysemic in natural language and it serves as a basis for making inferences. Abstracted from the domain it limits the possible interpretations of the vocabulary. The extraction of ontologies from the semantic of a description language leans on Wittgenstein's metaphysics and picture theory from Tractatus and language games from Investigations.</p>

## From the ALWS archives: A selection of papers from the International Wittgenstein Symposia in Kirchberg am Wechsel

In cooperation with the Austrian Ludwig Wittgenstein Society (ALWS) and within the framework of the European Agora project, the Wittgenstein Archives at the University of Bergen (WAB) here makes available Open Access a selection of papers from the annual International Wittgenstein Symposia (IWS) in Kirchberg am Wechsel, Austria. The selected papers are collected in issues organized according to the year of original publication. The papers can be browsed by issue, but also by author or title (**see the "Browse" navigation block in the right sidebar**). They are made available under the Creative Commons General Public License Attribution, Non-Commercial, Share-Alike version 3 (CCPL BY-NC-SA).

Within the framework of Agora, WAB also contributed Open Access a selection from its *Working Papers from the Wittgenstein Archives at the University of Bergen* (1991-2005) / *Publications from the Wittgenstein Archives at the University of Bergen* (2007-) and audio and video recordings of lectures and conferences held in Bergen (see http://wab.uib.no/agora-wab). Equally, within Agora, WAB and ontos verlag made jointly available Open Access the first 18 volumes of Publications of the Austrian Ludwig Wittgenstein Society - New Series (2006-2011; see http://wab.uib.no/agora-ontos).

WAB, ontos verlag, Agora and the Nordic Wittgenstein Society (NWS) were also central in establishing the new Open Access Wittgenstein journal *Nordic Wittgenstein Review* http://www.nordicwittgensteinreview.com/.

This republication of a selection from the Kirchberg International Wittgenstein Symposia papers is advised by the following editorial board: Christian Kanzian (Innsbruck), Volker Munz (Klagenfurt), Klaus Puhl (Vienna), Sascha Windholz (Baden).

**How to cite a paper from this site**

Note that the single items' current URLs are temporary.

We suggest the following citation style:

[author]: "[title]". In: From the ALWS archives: A selection of papers from the International Wittgenstein Symposia in Kirchberg am Wechsel <http://wab.uib.no/agora-alws/>. Republication by the Wittgenstein Archives at the University of Bergen, 2013. Original publication in: Papers of the [number] IWS: [Symposium title] (ed. [editor(s)]). Kirchberg am Wechsel: ALWS [year], pp. [number]-[number].

Example:
Terje Aaberge: "Formal Mechanisms for Reduction in Science". In: From the ALWS archives: A selection of papers from the International Wittgenstein Symposia in Kirchberg am Wechsel <http://wab.uib.no/agora-alws/>. Republication by the Wittgenstein Archives at the University of Bergen, 2013. Original publication in: Papers of the 31st IWS: Reduction and Elimination in Philosophy and the Sciences (eds. Alexander Hieke, Hannes Leitgeb). Kirchberg am Wechsel: ALWS 2008, pp. 11-13.
